Our Growth & Research Initiatives

- Expand Nuclear Remediation Process
- Market to Nuclear Power Plants
- Expand Hydrogen Reach to Underserved Markets
- Market Chemical Products That Resist High Temperatures
- Increase Research in Our Energy Creation Efficiency

MM LLC

Our Mission

Bring our disruptive clean energy technologies to full commercialization. Magnetic Miles LLC is developing an array of technologies that can change the future of Clean Energy production. Among our research and development activity goals include:

- Remediation of nuclear waste.
- Produce abundant, low-cost, renewable clean energy.
- Resulting in cost-advantage Heat and Electrification.
- Producing hydrogen as an inexpensive byproduct.

Magnetic Miles LLC

Billions of energy consumers are awaiting a decarbonization solution while the Earth is dying from the systematic abuse of its natural resources. Magnetic Miles LLC has worked diligently on possibly the greatest scientific breakthrough in renewable clean energy technology. We have a patented system that has been researched and developed by our team of engineers and scientists. This engine has been tested and could be the cleanest, easiest and fastest solution to remediate nuclear waste as well as the effects of climate change.

Douglas W. Lindstrom, PhD
Physicist
Mechanical Engineering
Co-Author:
Principles of ECE Theory I & II

Magnetic Miles Technology Assessment Summary

Findings from an independent assessment recently completed by Dr. Douglas Lindstrom are summarized below with comments and observations that deserve special note as they clearly differentiate the Magnetic Miles technology.

- “The MM technology is very unique because it demonstrates the possibility of generating heat and electrical energy via the LENR mechanisms that are far greater than the energy inputs required to drive the process in a controllable manner” ...Lindstrom
- “It does this in a controlled manner, where the output parameters of the LENR are controlled by the operating characteristics of the MMIC device.” ...Lindstrom
- “Low energy waste remediation (LENR) reduces the nuclear half-life of a radioactive material, rendering it environmentally inert in a much shorter period of time.” ...Lindstrom
- “As a process, aqueous electrical discharge phenomena offer a plethora of anomalous behaviors that have been reported in the literature, and observed by Magnetic Miles during the course of development...” ...Lindstrom
- “The (MMIC) apparatus is characterized by a rise and fall in electrical energy levels in alignment with conventional thinking, however unexpected huge power surges in the apparatus occur in somewhat regular fashion...possibly LENR behavior observed in the apparatus.” ...Lindstrom

TECHNOLOGY

Our Scientists and Engineers in Magnetic Miles LLC Labs Are Developing Safe and Renewable Energy That Can Conceivably Eliminate Coal, Oil, Natural Gas, Fossil Fuel, Open Pit Mining and Fracking

There are numerous damaging environmental impacts of coal that occur through its mining, preparation, combustion, waste storage, and transport.

- Greenhouse gas emissions caused by surface mining - According to a 2010 study, mountaintop removal mining releases large amounts of carbon through clearcutting and burning of trees and through releases of carbon in soil brought to the surface by mining operations.
- Loss or degradation of ground water.
- Radical disturbance of 8.4 million acres of farmland, rangeland, and forests, most of which has not been reclaimed.

The Future of Fossil Fuels During the Transition to Alternative Energy

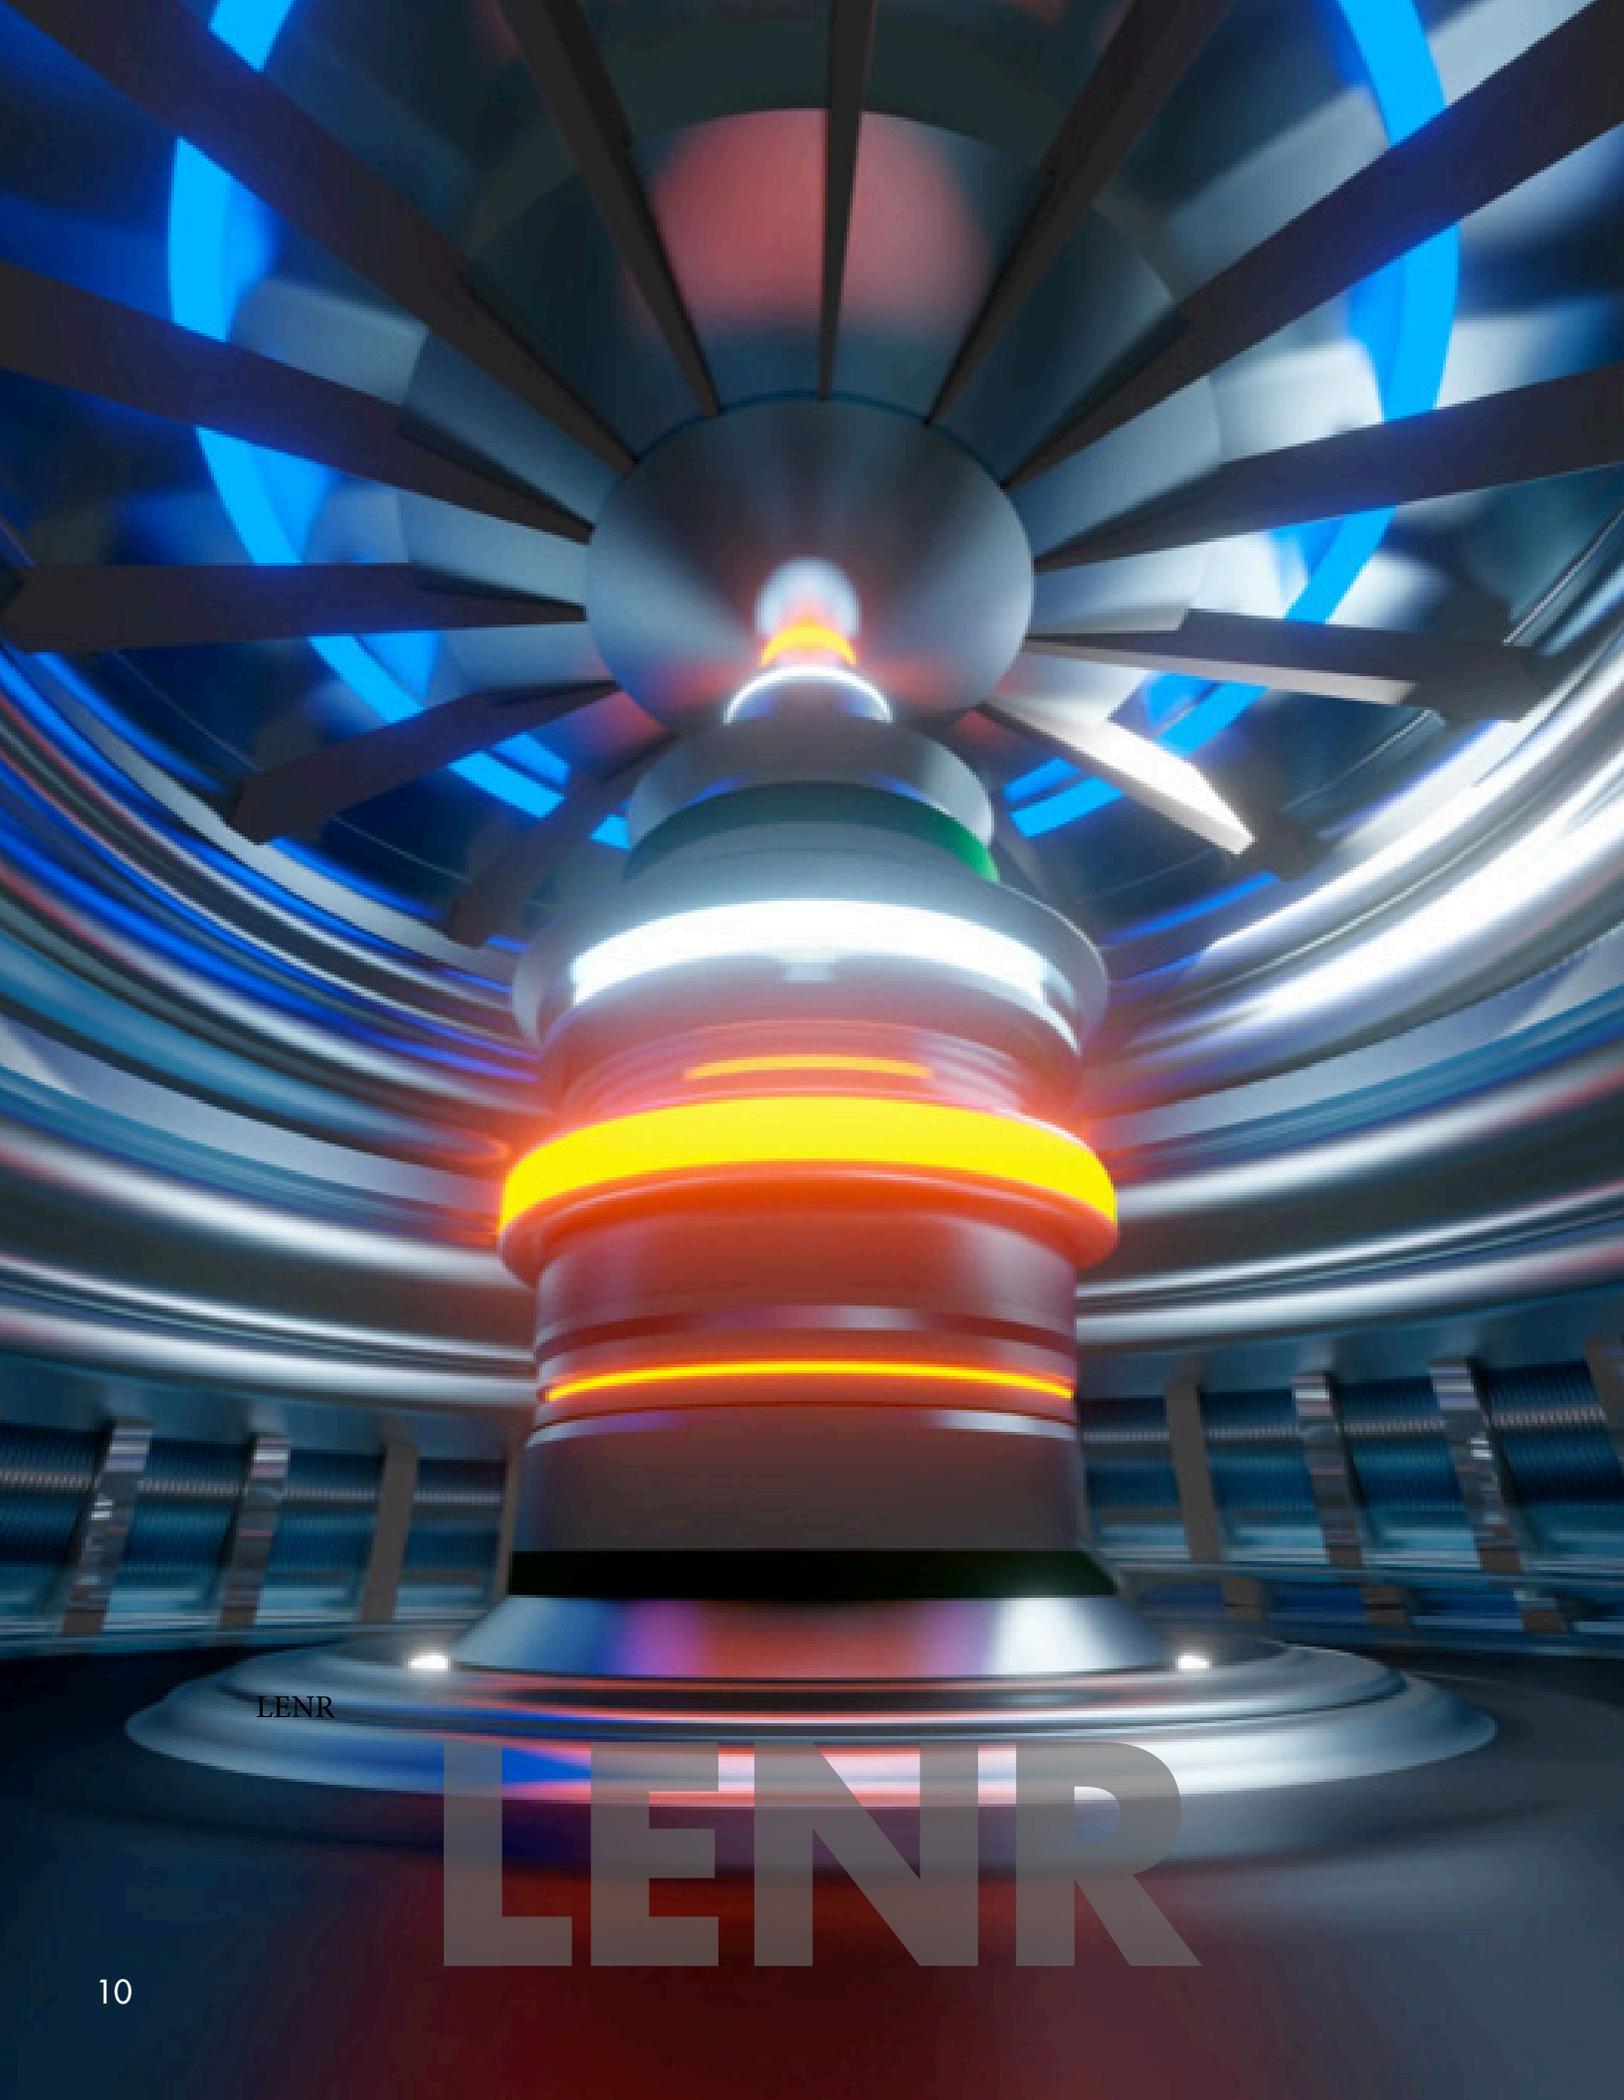

Fossil fuels will still provide 60% of energy in 2040, compared to 85% today, but the pattern of use will change, away from coal and towards gas, and increasingly concentrated in industry.

The impact differs across the different fossil fuels: Coal must decline sharply and immediately, by around two thirds to 2040. Coal use would increasingly be concentrated in steelmaking and industry. In power generation, of which coal accounts for 40% today, coal would therefore need to be phased out even more rapidly.

Oil consumption must peak sometime in the 2020s, and then fall by one-third to 2040. This will be accomplished mostly by finding alternative fuels within transportation, e.g. by large-scale electrification of the vehicle fleet. Natural gas use may rise slightly during the coming 25 years, before falling again to end up at roughly the same level as today in 2040. Gas will still be used across the energy system where alternatives are difficult to scale, e.g. some power generation, industry and heating.

The world is quickly switching to electric cars and planes.....but where does the electricity come from? Options are solar, wind and the emerging novel plasma heat engine:

Votonx® Technology.

LENR

LENR

LENR TECHNOLOGIES

Magnetic Miles LLC has, over the course of the past fifteen years, developed a technology that is applicable to the LENR industry. It is unique because it demonstrates the possibility of generating heat and electrical energy via the LENR mechanisms that is far greater than the energy inputs required to drive the process in a controllable manner.

The heat energy generated by LENR was speculated to be on the order of 10,000 times that supplied to the reaction for extremely short periods of time, the gain in electrical energy is 1.18×10^4 . It does this in a controlled manner, where the output parameters of the LENR are controlled by the operating characteristics of the MMIC device. The next step is to explore and expand the basic controlled LENR technology to the point where it can be transferred to the utility level power generation and to expand the nuclear waste remediation technologies to the point that the appropriate industrial entities that have the capability, in terms of engineering and manufacturing know-how, can take it and develop the technology for their own applications.

When completed, the new technology will make existing fossil fuel and nuclear power generation technologies obsolete, and will provide a proven, fast and cost effective method for cleaning up existing nuclear contamination.

There is a sizable and growing community of industrial and governmental organizations that are committing ever-increasing resources to the goal of proving the viability of those same scientific findings.

Leonard Gentile
Mechanical Engineer

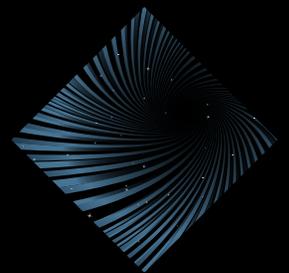

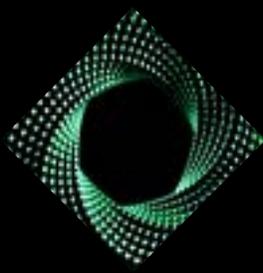

Magnetic Miles LLC Power Source

Our Magnetic Impulse Controlled Plasma Power Source (MMIC)* has three points of potentially positive environmental impact:

- Producing LENR and CLEANER Energy to the utility level electrical power industry where it can adapt to existing infrastructure, eliminating the reliance on fossil fuels.
- Providing an economic and timely solution for nuclear waste remediation.
- Propagating the anomalous generation of hydrogen that can adapt to existing infrastructure, eliminating the reliance on fossil fuels.

How to Invest in Magnetic Miles LLC

Cryptocurrency

ICO - Initial Coin Offering

The world is rapidly digitizing, and blockchain will play a critical role in this global transformation. For those interested in entering into this trend, invest in a fund of digital assets and have diversified exposure to the major categories of blockchain technology.

The investing Procedure

Coinbase.com

To buy Ethereum – This is also available in the Android/Apple App Store

MetaMask.io

To setup a crypto wallet – This is also available in the Android/ Apple App Store

Uniswap.org

This is only available on PC – Connects to MetaMask wallet to Coinbase
